

**IF YOU ARE NOT INSTALLING PANELS IMMEDIATELY, PLEASE, FOLLOW THESE GUIDELINES.**

*If water is permitted to enter the bundle, it is necessary to open the bundle, separate sheets and dry all surfaces.*

1. Prolonged storage of sheets in a bundle is not recommended, as galvanic corrosion may occur, causing the paint to bubble. If conditions do not permit immediate erection, extra care should be taken to protect sheets from white rust or water marks. It is recommended to store panels in a weathertight building.
2. If panels cannot be stored in a dry area, store bundled sheets with one end slightly elevated and off the ground, to allow air circulation beneath bundle and to prevent rising water from entering the bundle.
3. Prevent rain from entering the bundle by covering with tarpaulin, making provision for air circulation between draped edges of tarpaulin and the ground.

***Warranty is void if panels are not erected within 6 months.***
